

## Considering Motorization?

Windows that are typical candidates for motorization include:

- High or Hard to reach areas
- Windows over sinks and tubs
- Large expanses of glass that make opening or closing difficult
- Western and Southern exposures for glare and heat loss/gain

### Affordable

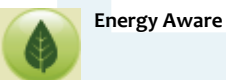

Existing 2" blinds can be motorized with battery operated tilt only function for under \$100.00\* per window. Other low-voltage systems are available and will fit within many budgets.

### Versatile

Many existing window treatments can be retro-fitted with motors. Low voltage and battery systems make it possible to minimize unsightly wires.

### Functional / Economical

Motorized window coverings are easy to operate with remote control, wall switches, timers or automation systems. Opening and closing window coverings during the day and evening will keep your home cooler in the summer and warmer in the winter.

Energy Aware

\* IR system up to 90 Square Foot maximum area.
